The Weston Master V Universal Exposure Meter 1960s UK

UK Made - Model S461

Weston Meters were made in the UK and USA by Sangamo Weston, and the differences between the two are very minor but they have different model numbers. Some later models were made by other manufacturers under licence. The US company was founded in 1888 Springfield Illinois as a manufacturer of electrical measuring instruments with a factory in Newark NJ, with the UK company following on in Enfield Middlesex a year later.

The fifth of the Weston Master series, this meter was made only in the UK, starting in 1963 and continuing to 1972. Model S461 in the UK and 748 in the US. It is very similar to the EuroMaster (Europea in the US) which followed it. Aluminium with a beige-gray plastic case, they were not readily available in the US and not widely sold in the UK

The old scales foot-candle (lumen) scale was replaced by an arbitrary 2-10 and 10-16 scale. ASA to 16000 (DIN to 42), f1-32, 90 sec - 1/1200 and arbitrary scale numbers of 2-10 and 10-16.

Note

Made in England Serial Number UT867
This Unit Requires Calibration
